

Designing Groww for the Gen Z Investor

• THE PROBLEM

For a 20–26-year-old, starting to invest is different from investing as an experienced investor. Many are receiving their first paycheck, working part-time or are still studying. They may have access to investing platforms, but not necessarily the knowledge, confidence or money to know where and how to begin.

The opportunity is therefore not just to give Gen Z more investment choices. It is to make the first investing experience simple, understandable and less intimidating.

• SCOPE

Target user: Indian users aged 20–26 who are first-time or early-stage investors.

Market: India

WHY THIS SEGMENT ?

19.34 Cr	66%	9%	56%
CDSL investor	Gen Z aware	Gen Z market	Gen Z share accounts participation of future intenders

*CDSL investor accounts as of September 30, 2026. SEBI Investor Survey 2025.

• OUT OF SCOPE

To keep the solution focused, I am not solving for:

- Experienced investors
- Intraday & F&O trading
- Advanced portfolio management
- Tax & wealth management
- Loans, insurance and other financial products
- A complete redesign of the existing Groww app

The focus is specifically on improving the early-stage investing journey, rather than building another all-purpose financial product.

• MY SOLUTION

THE PRODUCT PRINCIPLE --:

LEARN -> PRACTICE -> INVEST -> BUILD -> SHARE

LEARN : Short, contextual financial lessons that explain concepts in simple language when the user actually needs them.

PRACTICE : A mock-money experience where users can experiment with investing and understand their decisions without risking real money.

INVEST : A simple Start Small journey that helps users move from learning to making their first manageable investment.

BUILD : Progress, milestones and investing streaks that encourage users to turn their first investment into a regular habit.

SHARE : Optional achievement cards for milestones such as a first investment or investing streak, giving users a simple way to celebrate progress with friends.

• MVP

WHAT I WOULD BUILD FIRST

1. Gen Z onboarding

Understand the user's goals, investing experience and ability to invest.

2. Bite-sized learning

Teach the concepts needed for the user's next action instead of overwhelming them with information.

3. Mock investing

Let users practise with virtual money and understand how their decisions play out.

4. Micro investing

Create a simple path from practice to a first real investment.

5. Progress & milestones

Track the user's journey and encourage consistency after the first investment.

• POST-MVP

Social achievement cards → Referrals → Personalised recommendations → Deeper gamification
